LABORATORY REPORT

Account: 005093
Subject: 55
Date: 02/17/09

Inventory: MMPI-2™
Report: 00
Options: RO,RE

Sex: Male
Age: 52

This report from Behaviordata Incorporated is based on the system that was designed by Joseph C. Finney, M.D., Ph.D., a psychiatrist and a clinical psychologist at the University of Kentucky, with the help of research grants from the National Institute of Mental Health and U.S. Vocational Rehabilitation Administration.

Analysis of this kind can be done from various psychological inventories or from other information. Like any other report based on an inventory, this is subject to error. No decision should be made from this report alone, but only from consideration of the case history and all the available evidence. In this case, the inventory completed and submitted for analysis was the Minnesota Multiphasic Personality Inventory-2(tm) (MMPI-2tm), the trademarks and copyrights of which are owned by the Regents of the University of Minnesota. The University and its licensee, NCS Pearson, Inc. (NCS), do not license, sponsor, or endorse Behaviordata's modified scoring and interpretive system or any reports resulting from it.

Behaviordata has purchased from NCS the MMPI-2(tm) Basic Service Profile Report, reformatted by permission on page 2 which provides standard MMPI-2(tm) test raw and T scores. The remainder of Behaviordata's report, including the Profile on page 3, contains re-analyzed and changed raw and T scores based on the University of Kentucky's Interpretive System developed by J. Finney (JF). Behaviordata's re-analyzed and changed scores are indicated by the addition of "-JF" to the scale name throughout the Behaviordata report.

**MMPI-2 BASIC SCALES PROFILE Re-analyzed and Changed by the
 University of Kentucky's Interpretive System Developed by J. Finney**

The raw scores reported on this page were obtained by changing the standard MMPI-2™ test raw scores by reducing the factor of anxiety or social desirability and the effects of response set for the rare (possibly random) answers.

The T-scores reported on this page are not the standard MMPI-2 T scores. These are the T-scores normalized by the University of Kentucky's Interpretive System, developed by J. Finney, M.D., Ph.D., on a sample of 2000 men and women.

The Mf score is based on scores by subjects of the same sex as this subject.

The raw scores for scales L-jf, F-jf, K-jf, Hs-jf, HsK-jf, D-jf, Hy-jf, Pd-jf, PdK-jf, Mfm-jf or Mff-jf, Pa-jf, Pt-jf, PtK-jf, Sc-jf, ScK-jf, Ma-jf, MaK-jf, and Si-jf reported on these Scale Information pages were obtained by changing the standard MMPI-2™ test raw scores by reducing the factor of anxiety or social desirability and the effects of response set for rare (possibly random) answers.

The T-scores for scales L-jf, F-jf, K-jf, Hs-jf, HsK-jf, D-jf, Hy-jf, Pd-jf, PdK-jf, Mfm-jf or Mff-jf, Pa-jf, Pt-jf, PtK-jf, Sc-jf, ScK-jf, Ma-jf, MaK-jf, and Si-jf reported on these Scale Information pages are not the standard MMPI-2™ test T-Scores. These are the scores normalized by the University of Kentucky's Interpretive System developed by J. Finney, M.D., Ph.D., on a sample of 2000 men and women.

The simple T-scores given in the report are the true normalized scores developed by Joseph C. Finney, M.D., Ph.D., at the University of Kentucky. This is the only standardization of the MMPI that was sponsored by a research grant from the National Institute of Mental Health.

AT, FAT, and TFAT scores are computed to reduce effects of response sets correlated with the A factor and the F scale.
